

Raghu Vijaykumar | Staff Software Engineer | Cloud, Data & AI

+91 9035311376 | raghu.dinka.vijaykumar@gmail.com | [Github](#) | [Leetcode](#) | [LinkedIn](#)

Software Engineer with 9 years of experience building scalable cloud, distributed systems, and data platforms. Proven track record in designing resilient architectures, optimizing performance, and driving AI/ML-powered innovation. Passionate about solving complex problems with clean, impactful solutions.

Skills

Primary Skills

- **Programming:** Java (Spring ecosystem, Spring Shell, GraalVM, test & build frameworks), Python (Flask, Streamlit, Poetry), Flutter (Android & Firebase) – backend-centric development with focus on APIs, services, and system integrations across web and mobile platforms.
- **Generative AI:** Agentic applications using LangChain / LangGraph, Codex skill engineering, OCI Gen AI, and GCP Vertex AI for multimodal workflows.
- **Cloud Platforms:** GCP / AWS / OCI – hands-on experience designing event-driven, data processing, containerized, and serverless architectures, along with infrastructure provisioning, networking setup, and application deployments using core cloud services.
- **Data Engineering:** Apache Beam (Dataflow), Apache Nifi, Kinesis, Datastream, GoldenGate – building scalable data ingestion and transformation pipelines.
- **Databases:** SQL (MySQL, PostgreSQL, OracleDB), NoSQL (DynamoDB, Firestore), Cache (Redis), Data Warehousing (BigQuery, Athena, Glue).
- **Monitoring & Logging:** Grafana, Metrics – centralized observability and performance tracking.
- **Architecture:** System Design, Distributed Systems, Data Structures & Algorithms.

Supporting Skills

- **DevOps:** Docker, Kubernetes, Jenkins, Helm, Terraform, Vault, Tartan CI/CD, Maven/Docker build optimization – CI/CD automation, container orchestration, and infrastructure as code.
- **Security:** Data Encryption, Threat Modeling, OWASP Principles, Static and Dynamic Testing.
- **Networking:** VPCs, NATs, Load Balancers, DNS, Gateways – secure and scalable network architectures.

Work Experience

Oracle - (OHAI)

Bangalore

OHAI leverages AI and Oracle Cloud Infrastructure (OCI) to transform healthcare with data-driven insights and innovative patient care solutions. Worked in a Life Cycle Management team to deliver managed PAAS for Healthcare solutions.

Staff Software Engineer - IC4

Feb 2025 – Present

- Pioneered organizational adoption of AI-assisted development to automate manual developer workflows; engineered custom Codex skills (Jira API, Bitbucket CI, SSH/SQLcl, Confluence sync) and mentored engineers as AI Champion, driving adoption; personally clocking ~2B tokens per week.
- Addressed slow, manual developer setup times by leading L0-DEV product environments delivery; authored design and cost estimation models, reducing environment provisioning from 8 weeks to 1 week, and ultimately to under 1 day.
- Led SI (Semantic Index) instance-level automation to replace manual provisioning; collaborated on contract validation and automated GoldenGate replication (100 TB datasets), schema upgrades, and backfills, enabling repeatable, parallel multi-client deployments.
- Streamlined fragmented deployment workflows for Oracle Health Management Plane (OHMP); led Tartan onboarding to automate security patching, implemented automated SEV2 failure handling, and optimized Docker/Maven builds, cutting build times by 50% and improving release consistency.
- Addressed high deployment risks for OHMP by establishing its first release validation framework; wrote ~25K lines of integration test code for local one-box and staging validation, boosting integration test coverage from 0% to 30% to support robust release decisions.
- Targeted slow, multi-day environment personalization and setup times; designed and developed unified CLI tools (Bandu & SF CLI) using Spring Shell and GraalVM, reducing setup and enterprise configuration flows from several days to under one hour.
- Scaled engineering capacity and operational discipline during rapid growth; conducted 25+ technical interviews, led daily scrums, and authored Confluence runbooks, successfully resolving critical Jira SD queues and incident response pipelines.

Equifax

Remote

Equifax is a global information services company that provides credit reporting, risk management, and fraud detection solutions. Contributed to Enterprise Data Analytics.

Lead Software Engineer - IC3

Jan 2023 – Jan 2025

- Led platform solutions for 4 enterprise products, improving cross-system collaboration for billing and credit workflows.
- Built a chatbot & SQL agent using Streamlit, Redis Memory-Store, and LLMs (Gemini, Claude, Llama), handling 10K+ daily analytics queries on Big-Query.

- Boosted system throughput 5× by transitioning from DynamoDB to Kinesis Streams with private endpoints.
- Implemented security baselines for 4 GCP services (Datastream, Dataflow Prime, Cloud Run, Workbench) using STRIDE modeling, HA and DR strategies.
- Facilitated Oracle → BigQuery ingestion using Datastream + Terraform, reducing ingestion time by 90%.

Senior Software Engineer - IC2

May 2022 – Jan 2023

- Built multi-cloud infrastructure (GCP-AWS) supporting \$10M/day revenue and 100M daily transactions with HA & DR; utilized Glue, Athena, EKS, Lambda, Vault, and encryption.
- Enhanced batch processing efficiency 5× via partitioned chunk-oriented Spring Batch jobs on GKE.
- Established weekly release cadence, decreasing change tickets by 90% and unifying security + static scans.
- Strengthened security posture by 20% by enforcing controlled package repository management.
- Decreased QA effort by 80% using automated regression testing via Jenkins & Python.

Boeing

Bengaluru, India

Boeing processes global flight data for commercial and defense operators. Part of the flight data processing team.

Senior Software Engineer - IC2

May 2021 – May 2022

- Consolidated 10 services into a unified deployment stack using Jenkins, Docker, Kubernetes, Helm, lowering deployment time by 60%.
- Standardized metrics and health checks for 10 microservices; integrated vulnerability scanning via Aqua.
- Added API automation testing with Newman CLI to CI/CD, cutting manual checks by 90%.
- Reduced BigQuery storage costs by 80% via normalization and timestamp-range optimization.
- Supported ITAR-compliant OpenShift setup for defense teams, decreasing time to market by 2 months.

Software Engineer - IC1

June 2018 – May 2021

- Optimized Apache Beam pipelines on Dataflow processing 500GB/day flight sensor data.
- Built Apache Nifi ingestion layer on GKE for 40+ airline operators.
- Conducted sentiment analysis on 10K+ Glassdoor reviews using NLTK to improve new-hire satisfaction.
- Received 5+ awards for high performance and engineering excellence.

Tayana

Bengaluru, India

Tayana provides telecom solutions including charging gateways, roaming, and loyalty systems.

Software Engineer

June 2016 – June 2018

- Achieved 1M TPS with high availability across a 4-VM cluster by benchmarking MySQL NDB in-memory grid.
- Developed charging protocol REST APIs via JNI, enabling Java ↔ C++ communication at 1000 TPS.
- Performed GPRS tunneling protocol testing for ~1000 TPS throughput enabling roaming services.
- Contributed to 5 telecom products with 100% protocol compliance across subscriber, loyalty, and charging systems.

Personal Projects

- [AI Tools Monorepo](#) — Built a Python UV-based monorepo unifying newsletter summarization (RSS → multi-LLM summaries → Telegram) and RAG-driven documentation generation with reusable modules for embeddings, vector stores, LLM abstraction, and audio processing, delivering a single CLI automation layer that improved daily workflow efficiency.
- [Paper To Reel](#) - Creating a pipeline that converts comic books into short storytelling videos using OCR for text extraction, LangGraph & LLMs for context generation, text-to-speech for narration, and video generation tools. Samples [here](#).
- [My Blog](#) - Built a personal knowledge-sharing platform using Hugo and GitHub Pages; published 5+ long-form posts on distributed systems & engineering challenges.
- [Banter](#) - Engineered a Flutter mobile app displaying jokes from Reddit & other sources with translation features; exploratory project comparing Flutter UI/UX with web frameworks.

Education

Visveswaraya Technological University

June 2012 – May 2016

Bachelor of Engineering, Electronics & Communication

Mysuru, Karnataka, India

- Project: LDPC Codes for Near-Earth Space communication programmed using HDL at ISRO Satellite Centre, Bengaluru.
- Internship: BSNL EETP program on telecom equipment spanning 6 months with 3 certification levels.
